

Impact Summary

I'm a product leader who learns product strategy from customers first. Six years of end-to-end execution across international logistics, operations scaling, and regulated home care have taught me that the best roadmaps come from watching what your users actually struggle with. Then eliminating that friction before building feature lists. In home care specifically: I identified that manual PAR tracking was the authorization-compliance bottleneck, shipped a centralized platform solving that problem, and validated it with a live customer seeing 60% overhead reduction in authorization management. I own the full product lifecycle (discovery to deployment) collaborating across engineering, operations, and compliance teams to balance technical debt with high-impact trade-offs. Having spent a decade in operations and the last year in deep niche validation, I am looking to bring this expertise to an established market leader where customer trust and market presence compound the value of every solution shipped.

Experience

Senior Product Manager, Co-Founder | Ariune LLC · PARCOVO — Colorado

Aug 2025 – Present

- Defined product strategy and owned delivery of 22 core modules by prioritizing highest-cost-of-failure workflows first (compliance & authorization tracking) over most-requested features; shipped to production with daily validation from live agency ops staff.
- Eliminated coordinator's manual PAR workflows (spreadsheet tracking, email threads, duplicate document versions) with a centralized dashboard surfacing real-time compliance deadlines (license renewals, PARs expiring, supervisory visits due)
- Leveraged AI-assisted tooling (Claude Code, Cursor, Google AI Studio) across product shaping and edge case discovery to compress feedback loops with the live customer, enabling rapid iteration on compliance workflows without sacrificing the human judgment required for HIPAA-grade decisions.
- Designed authorization system as a compliance ledger, not a document manager, enabling downstream integration with Medicaid submission workflows and EVV data pipelines; identified this as the core product thesis that scales to multi-agency deployments without custom work per customer.

Lead Product Researcher & Operations Strategist | Complex Home Care Solutions — Colorado

Mar 2025 – Present

- Embedded inside live home care operations as the primary discovery engine for PARCOVO — mapping PAR workflows, Medicaid documentation requirements, caregiver credentialing, and EVV compliance gaps. Converting operational pain into formal product architecture.
- Translated operational friction into formal product requirements. Identified that manual data entry is root cause of 80% of downstream rework, it became the core product design principle for PARCOVO.
- Validated product adoption with 7 active daily users, then designed a prioritization system to scale across multiple agencies: regulatory compliance first → operational efficiency second → feature requests third. Result: new agencies can launch without custom engineering

B.S. Management Information Systems | Columbia College — Denver, CO

Apr 2022 – July 2025

Growth PM / Sales Operations Manager | Autocom Japan Inc. — Ulaanbaatar, Mongolia

Sep 2020 – Mar 2022

- Led growth strategy for the Mongolia branch, scaling the team by treating organizational expansion as a product problem—defining KPI dashboards, success metrics, and performance systems to align cross-functional teams across Japan, Africa, and the Caribbean
- Secured a sustainable competitive pricing edge by identifying and integrating a real-time auction data feed into core operations; productized the onboarding experience by designing centralized info hubs and pre-built templates, reducing new-hire ramp time

Logistics & Compliance Coordinator | Kaneyama LLC — Ulaanbaatar, Mongolia

Jun 2018 – Aug 2021

- Owned the revenue cycle and product integrity for the vehicle import pipeline, managing the financial reconciliation and safe arrival of assets.
- Leveraged data-informed decision-making to optimize billing accuracy and supply chain velocity, directly contributing to the dealership's bottom-line results and customer satisfaction.
- Served as trilingual liaison [English · Mongolian · Japanese] between international suppliers and customs authorities — where noticing that a well-designed process beats effort sparked the instinct to ask why systems are built the way they are.

Education

M.S. Information Technology Management

Colorado State University — Colorado

2025 – Expected

B.S. Management Information Systems

Columbia College — Denver, CO

2027 2022 – 2025

B.A. Linguistics

University of the Humanities — Ulaanbaatar

2014 – 2018

Skills & Tools

Product	Roadmaps & Prioritization · PRD Writing · Go-to-Market · Opportunity Sizing · Adoption Metrics · Stakeholder Alignment
Domain	Home Care Operations · PAR / Prior Auth · HIPAA Safeguards · Medicaid Documentation · Caregiver Credentialing · EVV Context · Regulated SaaS
AI Tooling	AI-assisted prototyping (Claude Code, Cursor, Google AI Studio) · Rapid spec drafting · Edge-case exploration with sound human judgment on regulated decisions
Technical	SQL · REST APIs · Python · FastAPI · React · TypeScript · PostgreSQL · Docker · Notion · Git
Languages	English (Fluent) · Mongolian (Native) · Japanese (Intermediate)
